1. An apparatus for conveying sheets, comprising:
  - a transport, the transport comprising a first flat member and a second flat member disposed substantially parallel to the first flat member, a gap between the first flat member and second flat member forming a path suitable for movement of sheets therethrough, the path being disposed substantially vertically;
  - the second flat member being movable relative to the first flat member to release a sheet disposed in the path; and
  - a bottom structure, disposed at a bottom of the transport, for causing an edge of a sheet landing thereon to be inclined.
2. The apparatus of claim 1, the bottom structure including an inclined ramp.
3. The apparatus of claim 1, the bottom structure including a tipping member.
4. The apparatus of claim 3, the tipping member including a rod.
